Amino Acids Explained

Essential Amino Acids

These are the amino acids your body cannot make on its own. They must come from your diet. Without them, your body can’t build muscle, repair tissue, make hormones, or run key brain and metabolic processes.

Insight: If you miss these, performance and recovery suffer quickly — there’s no “backup plan” inside your biology. Consistent, high-quality animal-based sources keep your system running at full capacity.

Nonessential Amino Acids

Your body can make these on its own — but only if it has the right raw materials (other amino acids, vitamins, and minerals). Stress, illness, hard training, or nutrient deficiencies can slow that production, making food sources important for optimal levels.

Insight: Think of these as “conditionally essential” when your system is under pressure. Supplying them through animal-based foods ensures your body isn’t burning extra energy to make them when it could be using that energy to perform and repair.

cProvides sustained energy during workouts, supports muscle coordination, and helps prevent fatigue.

Identity

"

Be It Before You See It

Ultimately, your success will come from who you are, not the tactics or strategies you use. All the strategies work. What matters is how you show up in the world and how you approach your work. Approach it like a professional, as if you were already the highly successful person you desire to be. Be it and then you'll see it manifest.

"

Remove Money Blocks

One major obstacle you'll likely encounter are your beliefs about money and how much is possible for you to make, how much you deserve or can charge, or what it means about you as a person. Realize money is an infinite resource that does not care about morality or your beliefs about it. Money is neutral, but it does operate according to certain 'laws' or principles. Make an effort to understand these principles. See the 7 Laws of Abundance mind map here.

"

Uncompromising Vision

Build a business that gives you what you want. Create a vision for your future and be uncompromising with that vision. Reverse engineer what it takes and work towards it. Don't get distracted by other so-called 'opportunities.'

If you miss these, performance and recovery suffer quickly — there’s no “backup plan” inside your biology. Consistent, high-quality animal-based sources keep your system running at full capacity.

2 Hours On 20%

"

Money Making Activities

Most people focus the vast majority of their time on “maintenance” activities rather than money-making activities. The first 2 hours of each day should be focused on the real needle-movers like content creation, product creation, copywriting, etc.

"

Automate, Delegate, Eliminate

The tasks that don’t move the needle much should be automated, delegated, or eliminated whenever possible so you can dedicate more time to the needle-moving activities.

"

Done Before Noon

If you spend 2-4 hours per day on the most important activities, you can out-produce almost everyone and at the same time work less than everyone. The goal: done working before noon every day. This is only possible if you’re extremely efficient with your time and energy and develop your ability to focus.

Arginine

=":
8Low motivation, depression, brain fog, cold intolerance.

What it does

}"d
bPrecursor to dopamine, norepinephrine, and thyroid hormones; supports mood, focus, and metabolism.

Owned Media

Reach At Will

Having an email list gives you the ability to reach people at will instead of being dependent on social algorithms. With the click of a button, you can reach thousands of people, whenever you want.

"

Reduce Dependencies

Once you have some traction, you want to reduce dependencies, meaning to not be dependent on any one platform in order to reach your audience. You should start building an email list as soon as possible so you can “own” your audience.

"

Your Own Social Platform

It’s also a good idea to build a free community of some kind, which acts almost as your own social media platform. This is another way to reach people and also builds trust and connection with you, a key ingredient in making sales.

Tryptophan

What it Does

O"^
\Precursor to serotonin and melatonin, supporting better mood, relaxation, and sleep quality.

hat it Does

Activates muscle protein synthesis for growth and repair, supports stable energy, and helps regulate blood sugar. Key for athletic recovery and lean muscle retention.

hat can I expe t when le s ar e low?

7Muscle breakdown, poor recovery, weakness, slow repair.

Aspartic Acid

New Opportunity

Ideally, your product should be positioned as a “new opportunity” or a “fresh” approach to solving a common problem. Think about how you can position your product as superior to other solutions out there by making it faster, simpler, easier, or better in some way.

Unique Angle

To make a product that sells like crazy, it should be unique in some way, different from what anyone else is doing. What makes your product better? What makes it uniquely yours?

Superior Method

Why is your product superior to other solutions? Why should someone buy your product and not someone else’s? Your product should make the buyer’s life easier in some way. People want speed, ease, and convenience.

Tryptophan

2% Conversion Rate

The average conversion rate for digital products priced between $200 and $2000 is approximately 2%. Meaning you’ll make about 1 sales for every 50 leads.

Price Point

To maximize your income but also your freedom, your product should be priced between $200 and $2,000. At this price point, your sales can be largely automated without the need for things like sales calls, coaching calls, and big launches.

50 Leads Per Day

So to make one sale per day, you’ll need about 50 leads (or clicks) per day. If you’re sending traffic to an opt-in page, you’ll need at least 100 clicks per day to average 50 leads per day.

"

100 Clicks

50 Leads Per Day

So to make one sale per day, you'll need about 50 leads (or clicks) per day. If you're sending traffic to an opt-in page, you'll need at least 100 clicks per day to average 50 leads per day.

Price Point

To maximize your income but also your freedom, your product should be priced between $200 and $2,000. At this price point, your sales can be largely automated without the need for things like sales calls, coaching calls, and big launches.

2% Conversion Rate

The average conversion rate for digital products priced between $200 and $2000 is approximately 2%. Meaning you'll make about 1 sales for every 50 leads.

SLO Funnels

"

Money As Leverage

A self-liquidating offer funnel used money as leverage instead of time. The goal is to create a lead generation machine that runs on autopilot and "liquidates" your advertising costs.

"

Break Even Point

The goal with an SLO funnel is just to break even, ideally within 7 days. For example: you pay $500 to send 50 people through your automated sales funnel that sells your $500 course. One person buys. Your ad costs are covered and you got 50 new leads for "free" essentially.

"

All Roads Lead to One

After you build your automated selling system, you should focus all of your energy on sending traffic to it. Everything you create on social media should connect in some way to your product or sales funnel. Don't have multiple links in your bio. Send people to ONE place.

Identity

"

Remove Money Blocks

One major obstacle you'll likely encounter are your beliefs about money and how much is possible for you to make, how much you deserve or can charge, or what it means about you as a person. Realize money is an infinite resource that does not care about morality or your beliefs about it. Money is neutral, but it does operate according to certain 'laws' or principles. Make an effort to understand these principles. See the 7 Laws of Abundance mind map here.

"

Uncompromising Vision

Build a business that gives you what you want. Create a vision for your future and be uncompromising with that vision. Reverse engineer what it takes and work towards it. Don't get distracted by other so-called 'opportunities.'
