if you are here just to look good.. cool that's gone happen..I call that a bi product
But there is a 1,000 other benefits you will experience from this simple.. simple lifestyle change. All we have to do is adjust our inputs.

Who's Is This For? Who's A Rookie?

Intangibly

- Systematic thinkers and processors
- Individuals committed to protecting their family's **health, wealth, and legacy** through daily choices
- Those seeking to make **faster, better, and more consistent decisions**
- People focused on improving their **lineage and generational health**
- Those trying to increase their chances of producing—or developing—a professional athlete.

Tangibly

- **Men** with **BMI 25+**
- **Women** with **BMI 30+**
- Individuals aiming to **reverse health issues** (autoimmune, hereditary, metabolic)
- People who regularly eat **processed or fast food**
- Those who feel **constantly tired**, experience **energy crashes**, or lack sustainable energy
- Regular **energy drink consumers**

FAQ

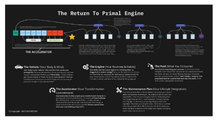

Q: **What's a animal based diet simply put?**
A: It's how humans are built to eat—centered on nutrient-rich animal foods with just enough fruit and honey to fuel performance, hormones, and recovery. It's not a fad or diet. It's a biological reset.
Q: **What's the difference between keto and carnivore?**
A: Keto is all about keeping carbs low, no matter where the food comes from. That could mean chugging seed oils and artificial sweeteners if they "fit the macros." Carnivore is strict—animal foods only, no exceptions. Animal-based finds the sweet spot: you center your meals around animal foods *but* still allow nutrient-rich, low-tox fruits and carbs that support hormones, energy, and performance. It's less rigid, more sustainable, and built for long-term vitality.
Q: **How is this better than plant based?**
A: Plant-based *sounds* clean, but most plants come with antinutrients, fake ingredients, and synthetic supplements to cover what they're missing. Animal-based gives you everything you need—complete proteins, bioavailable vitamins, essential fats—straight from the source. No supplements, vitamins needed. You absorb more, you recover faster, and you *feel* the difference.
Q: **Is it safe for kids?**
A: Not only is it safe—it's ideal. Kids need high-quality fats, proteins, and real nutrients to grow strong minds and bodies. Raw dairy, grass-fed meats, eggs, and fruit support everything from brain development to immune function

Return to Primal - Animal Based OS For Rookies
Is an educational, **systematic** approach to get the MOST from our bodies, mind, and our human biology WITHOUT anything additional but what we consume. No supplements, no vitamins, no whey protein, no equipment needed. Just a hunger for a better life for you and your family.

If you're systematic about achieving a goal, your chances of success increase dramatically—often 10x or more compared to someone relying on motivation or willpower alone.

START HERE

Nutrition should be looked at as a lifestyle. Never a diet. We may have phases through our journey. But to be successful at anything, you must integrate it with your lifestyle. How you do one thing is how you do everything...
Start your journey here to understand what it means to return your life to its primal state and the benefits waiting for you and your family.

See how everything we do aligns with who want to be, what we want to feel and things we want to accomplish? Input = Output. If you don't understand that now, you will NOT be successful at making this a lifestyle. You may successfully integrate as a diet.. but your results will be short. Remember, utilimatley our goal is to see our inputs in our generations to come.

Next, let's learn more about animal based diet and what we must do to successful integrate it with our lifestyle. its really simple tbh.. 5 steps simple...

2

See what i mean? All you have to do is hit 5 key areas and BOOM everything negative you are experiencing will likely disappear. Both internally and externally.

Now if you are on fire to start, heard all you needed to hear, know all you need to know, cool, get started on the right!

If you are systematic thinker, you are probably overwhelmed by all the big health words and you probably want to know more so you can see the full picture. If so, I've broken down molecius, vitamins, minerals, ruminat meats, raw dairy. This should give you a nice substance base to be able to see the full picture. These will also come in handy as you look level up. You won't be a rookie for long..

"This not a race, this a not marathon, this is life.."
There will be habits hard to break no matter how we feel. BUT if are inernational, we can break them super quick. It really does only take 7 steps to break a habit. Easier said than done, but if you're systematic about it, remember you are 10x more to accomplish your goals if you are systematic about.

Meal Stacking

Meal Stacking For Our Kids
Let's be honest nothing about changing how we eat is easy when the family isn't on board. And the hardest ones to shift? Our kids. Not because they're defiant... but because they haven't lived the decades of fog, fatigue, and frustration that pushed us to finally say 'enough.' They don't carry our guilt. They don't feel our inflammation. They're not trying to undo years of damage—we are. But that's also the gift. They don't need to be broken to be rebuilt. They just need a better start than we had.
